Discussion around how CTCs using the About My Child (AMC) Tool. Some are incorporating SSH questions into CTC intake (ie. embedding the AMC into the call by Service Navigation teams). Some are treating all referrals to the CTC as a referral to the SSH and redirecting to partners if appropriate no matter the referral source.

AMC not always completed/scored.

Early Infant Mental Health Care uses Ages and Stages (therefore may not complete an AMC if family has done this) although identified ASC vs AMC within context of mental health and child development.
